Architect's Statement

Building B is a ten storey university building of educational use completing the Gateway, with the Foundation Building (Building A), at the North-East corner of the site.

It is a taller and larger structure of the same family, which uses similar language as Building A, but the difference comes from the way it is sculpted, its bulk, height, colour, texture and expression.

Very large degree of care was paid to the relation with Building A and the rest of proposed build form of the masterplan. It acknowledges the main pedestrian axis placing its secondary entry point and the bookshop on this visual connection. The main entry is of the fan shaped plaza forming the urban space between the buildings. Servicing is from behind and is unobtrusive to the visual impact of the building. The façade treatment is transparent, using glass as much as possible to allow the advantage of utilizing the distant views of the sea and surrounding vegetation.

The various functional education uses are spread along the levels in a flexible manner to allow for future changes and different arrangements.

Overall idea was to create high standard landmark buildings to set out the rule and tone for the rest of them coming at later stage. The strategy employed was to engage buildings A & B in a lasting dialog of scale, form, colour and volume.
